

Happy arrival at one of the most mysterious cities of the world!

Quick download of the application
at the Venice Santa Lucia station.

The user chooses to be
or an actor or a spectator
at the application home page.

He makes a little "profile", capturing with a mobile photocamera his own distinctive feature. It allows him to be recognized by another "actor".

Then the “wish list” appears, permitting the user to choose a little wish, about how to greet a stranger.

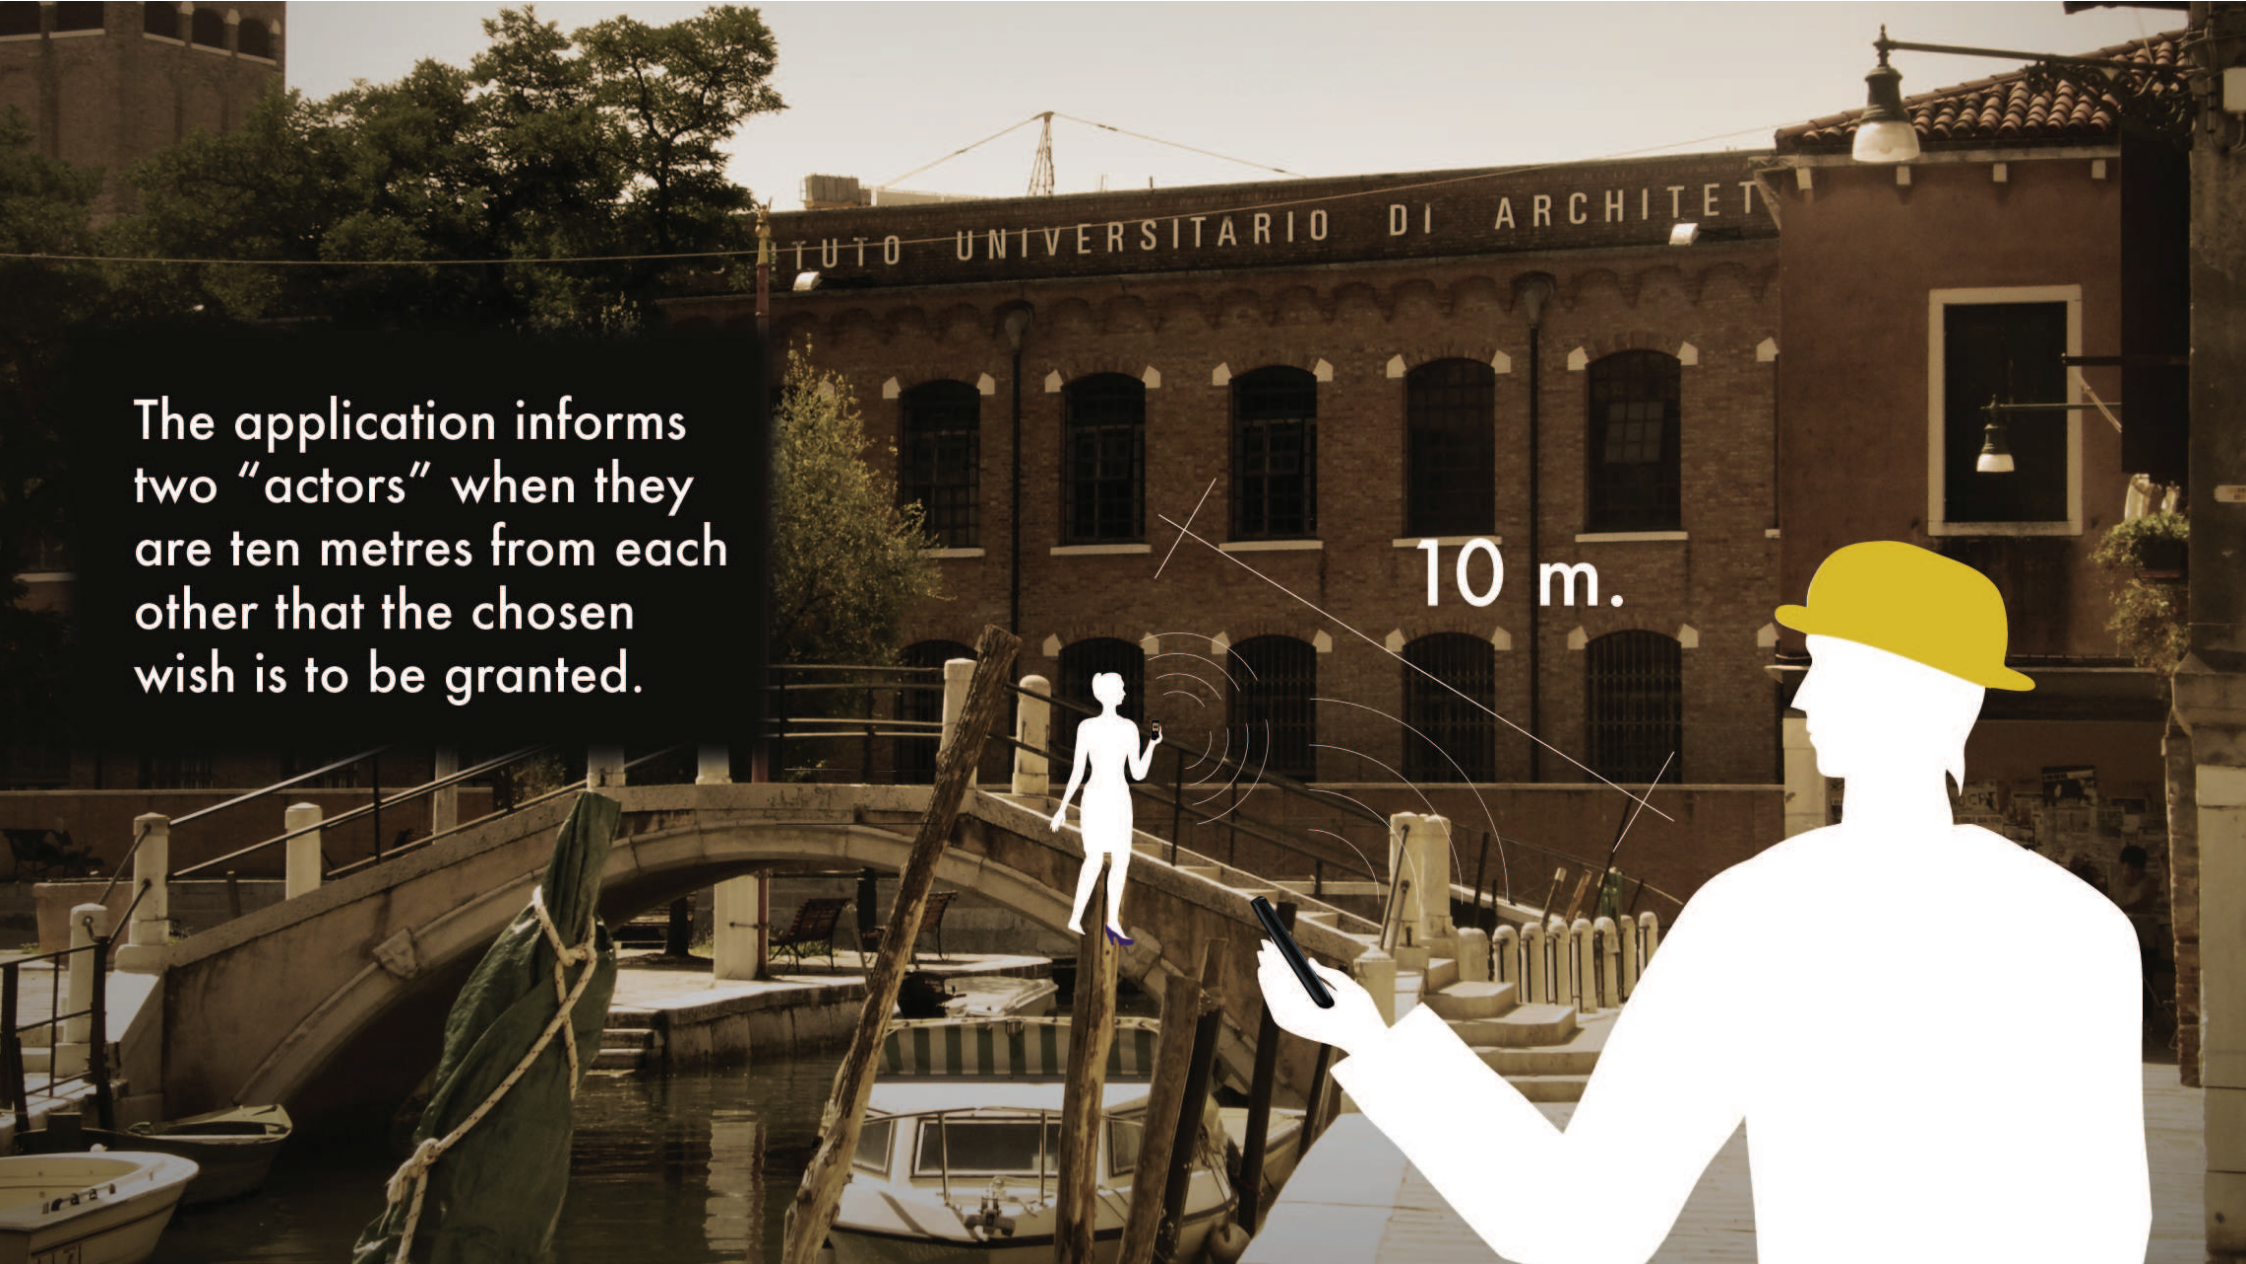

An animation shows the user what he must do when he meets the other person.

The user is now in the game! He shouldn't exit WISH FISH, but just enjoy Venice while it sets up his encounter. He must be patient, because it may take minutes or even hours.

The application informs two "actors" when they are ten metres from each other that the chosen wish is to be granted.

10 m.

Now the users need
to recognize each other
and to be brave enough
to interact with the other person.

There is another user, who've chosen at the home page to be a spectator. He also takes part in an interaction, but actors don't know about his presence.

end.
